

Wind. For my Community.

Wind is providing clean, reliable and safe energy to Canadians in every province – creating new social, economic and environmental benefits.

The 198 megawatt Wolfe Island Wind Facility near Kingston, Ontario, includes 86 wind turbines which generate emissions-free energy, provide income for the municipality, local landowners, and create jobs in maintenance and operations.

A man with short brown hair, wearing a brown leather jacket over a green button-down shirt, is smiling and standing in a grassy field. In the background, several white wind turbines are visible against a clear blue sky. The scene is brightly lit, suggesting a sunny day.

“I personally think this wind farm is the best rural Ontario good news story that you will find. Annual income from the wind development has allowed this municipality to achieve sustainability and to reduce property taxes. The construction phase significantly increased business for local shops and restaurants.”

— Former Frontenac Island Mayor, **Jim Vanden Hoek**, played a key leadership role in working with the wind developer to capture social and economic benefits for his community.

A recent Ipsos-Reid survey found 89% of Ontarians support the production of wind energy in their region of the province.
