

Wind. For my community.

Wind energy is providing Nova Scotia with clean, affordable power, new jobs and a brighter future as the province moves away from coal.

“This is a dream come true.

We’re working together as a community to help Nova Scotia build a cleaner electricity system that we can all be proud of.”

David Swan, Colchester-Cumberland Wind Field Inc.

The Spiddle Hill Wind Project near Tatamagouche is the first 100 per cent community-owned wind energy project to be installed in the province. More than 300 local investors are working together to bring economic benefits and environmental pride to the region as Nova Scotia moves away from fossil fuels.
